

# Corner Protectors

Chicks® Corner Protectors are thicker than others available in the industry. They are designed with a built-in cushion which makes the corner protector easier to remove; including the staple!

These corner protectors are manufactured with the same material used in parts of our Standard Door Plugs for added strength.

We are confident to claim that after extensive testing, Chicks® Corner Protectors will never crack or break while attached to the door.

Protect the edges of your doors by simply stapling the corner protectors to the bottom two edges of the door. When ready to remove, simply pop off with a screw driver.
